

Neighborhood	Members	Checkouts
Heliopolis	13	84
Maadi	19	106
Nasr City	15	97
Shubra	5	34
Zamalek	10	62

Our Basis:

We compared each neighborhood's percentage of registered members with its percentage of library checkouts. A neighborhood was considered under-represented when its checkout percentage was lower than its member percentage.

Our Finding:

Maadi was the most under-represented neighborhood. It represents **30.65% of the members**, but only **27.68% of the checkouts**, a difference of about **2.97 percentage points**.

A Plausible Reason:

One possible reason is that some members in Maadi may have less opportunity to visit the library regularly because of distance, transportation, or other commitments.

A Next Step:

The library could provide a **weekly mobile library (Bookmobile)** visit to Maadi next summer to make borrowing books easier for members in the neighborhood.
